SUMMARY

Backend Developer with **2.4 years of experience** in building scalable web applications using **PHP, Laravel, and PostgreSQL**. Experienced in developing **RESTful APIs, database optimization, authentication systems, and real-time features using WebSockets**. Proven ability to deliver secure and high-performance backend systems for production applications. Currently expanding expertise in **Java, Spring Boot, and AI-powered development tools**.

WORK EXPERIENCE

Junior Backend Developer

Delta Digitech Private Limited, Pune, Maharashtra **Jan 2024 – Present**

- Developed and maintained **scalable backend APIs using Laravel**, supporting production web applications.
- Designed and optimized **PostgreSQL database queries**, improving system performance and response time.
- Implemented **authentication and role-based access control (RBAC)** using Laravel middleware.
- Integrated backend services with frontend systems using **REST APIs and AJAX**.
- Implemented **WebSocket communication** for real-time application features.
- Fixed production bugs and improved system stability through proactive debugging.
- Implemented **cron jobs for scheduled tasks such as notifications and system maintenance**.

EDUCATION

B.E. – Mechanical Engineering 2022 | CGPA: 9.17/10
Datta Meghe Institute of Engineering Technology and Research,
Sawangi – Nagpur University

Higher Secondary Certificate (HSC) 2018|66.62%
Deepchand Choudhary Jr. College Seloo

Secondary School Certificate (SSC) 2016|80.80%
Deepchand Choudhary Vidyalaya Seloo

TECHNICAL SKILLS

Languages: PHP, Java
Frameworks: Laravel, Spring Boot
Databases: PostgreSQL, MySQL
Frontend: React.js , JavaScript
Tools: Git, Jira
AI & Emerging Technologies: AI API Integration, Prompt Engineering

KEY PROJECT

🚀 **Paathner – Indoor Navigation Solution**

Laravel | React.js | REST APIs | PostgreSQL

Developed backend services for an indoor navigation system designed for large buildings such as malls, hospitals, and airports.

Key Contributions:

- Built scalable backend services using Laravel framework
- Implemented WebSocket integration for real-time location tracking
- Developed multi-language support with dynamic translation
- Designed backend features for email, SMS, and push notifications
- Implemented secure data transmission using encryption and decryption
- Developed cron jobs for background tasks and system automation
- Supported admin features such as drag-and-drop interface management

🌐 **ApnaCart – Enterprise-Grade Multi-Vendor Hyperlocal Platform**

Laravel | React.js | REST APIs | MySQL | Gemini AI | Stripe

Developed a high-performance, full-stack food and grocery delivery ecosystem that bridges the gap between local merchants and digital customers through a modern, responsive web interface.

- Developed a scalable full-stack multi-vendor platform supporting grocery, pharmacy, and food businesses within a unified architecture
- Designed a multi-tier merchant classification system for category-based and location-aware product discovery
- Integrated Google Gemini AI to auto-generate product descriptions, branding content, and images, reducing merchant onboarding time by 80%
- Built a flexible delivery pricing engine supporting fixed-rate and distance-based (per KM) calculations with automated tax handling
- Developed a Merchant Control Panel for inventory management, order tracking, and promotional campaigns (offers/coupons)
- Implemented a centralized data hub to sync products and menus across external platforms.
- Created a responsive frontend with real-time order tracking and smooth UI interactions using modern React practices
- Integrated secure payment systems using Stripe along with Cash on Delivery (COD) support
- Deployed production-ready application: https://theapnacart.vercel.app/

📦 **Smart Inventory Management System**

Laravel | React.js | REST APIs | MySQL

Developed a web-based inventory management system to help businesses efficiently track products, manage stock levels, and monitor inventory transactions through a centralized dashboard.

- Developed backend modules using Laravel framework for product and inventory management
- Designed RESTful APIs for product, stock, and inventory operations
- Implemented product catalog management for adding, updating, and tracking inventory items
- Built stock monitoring system with low-stock alerts and inventory updates
- Developed purchase and sales tracking modules for accurate inventory records
- Implemented admin dashboard to manage products, inventory levels, and transactions
- Optimized database queries and indexing using MySQL to improve performance

CERTIFICATIONS & ACHIEVEMENTS

- Programming in Python and Java
- ‘A’ Certification by NCC with rank SGT
- District-level certification in hockey

SOFT SKILLS

Problem-solving, Quick learning, Team collaboration, Adaptability
